

IDC Health Insights: Asia/Pacific Connected Healthcare Digital Strategies

IDC Health Insights: Asia/Pacific Connected Healthcare Digital Strategies service provides its subscribers an overview of regional-level and country-level digital strategies that various health-related entities are undertaking currently. The program develops unique and comprehensive analyses of data based on annual surveys and analyst expertise, focused on providing actionable recommendations targeting the value-based healthcare system. Ongoing communications with industry experts, health industry stakeholders, and technology vendors, complemented by secondary research from conferences, publications, and third-party news sources, all bolster the actionable content. To ensure relevance, analysts work with subscribers to identify and prioritize specific topics to be covered in research reports.

Approach

The IDC Health Insights: Asia/Pacific Connected Healthcare Digital Strategies service provides in-depth analysis, comprehensive data insights, and research and consulting services using data-driven methodologies. Robust data collection covering regional healthcare organizations, IDC FutureScape predictions, and secondary research complement our program approach. IDC Health Insights analysts develop comprehensive analyses of this data to deliver actionable recommendations to the healthcare clients.

Topics Addressed

Throughout the year, this service will address the following topics:

- Evolving patient-centric care delivery models
